

DATA MERGER

MERGE SPECIFIC DATA FROM DIFFERENT EXCEL FILES AT ONCE.

Scenario

- Suppose you have hundreds of excel file having business details like – company names, email, address etc.
- Now you want to create a excel database where You want only the Business name and Email of the corresponding business.

Solution

- How You can do that? Manually?
- For Manually, You have to go through every single Excel file, Copy the data and paste them in your new Excel Database. If you have 100+ excel files it will take very long time.
- But, if you use our Data Merger App You can do this in 2 clicks.
- **You create Your Template→ Select the folder containing the Excel files→ Click on Start Button→ Your new database is ready in few minutes.**

The screenshot shows a software window titled "Data Merger" with a standard Windows title bar (minimize, maximize, close buttons). Below the title bar are three tabs: "Data Copy", "Find and Replace", and "Support". The "Data Copy" tab is active. The main area of the window contains the following elements from top to bottom:

- A text label: "Select folder containing source files:"
- An empty text input field.
- A "Browse" button.
- A text label: "Select Excel/CSV template file:"
- Another empty text input field.
- Another "Browse" button.
- A "Start Copying Data" button.

Three blue arrows point from text instructions on the right to specific UI elements:

- The first arrow points from the instruction "Select the target folder where your excel files are." to the first empty text input field.
- The second arrow points from the instruction "Select the template for your new excel file." to the second empty text input field.
- The third arrow points from the instruction "Press start after completing the above steps. That's all You will get a completion message." to the "Start Copying Data" button.

Select the target folder where your excel files are.

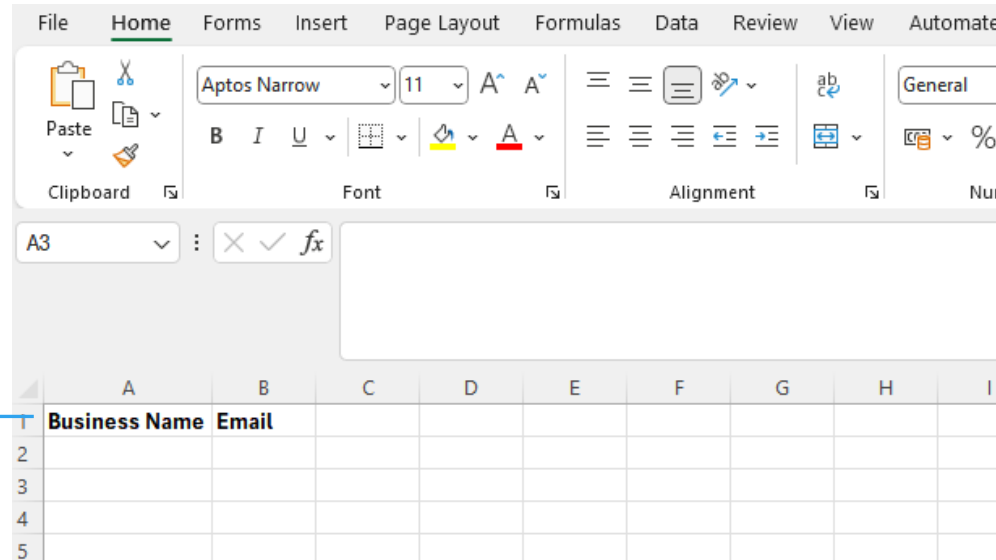

Select the template for your new excel file.

Press start after completing the above steps. That's all You will get a completion message.

What is Template file and its use?

Template is the file where you will design Your new Excel Database. Create its Column Header.
Suppose you need only two columns in your new Excel Database e.g Business Name and Email column.
You simply create an Excel file with this 2 column headers.

Column Headers

Important to Remember- Your column headers always and must be in **Row1**. As you can see in the above Picture it started from Column A, Row 1. App also assume that data in your excel files starts from Row2 and count Row 1 always as **Column Header**.

This column headers will be used as the reference to search by the App.

What is Template file and its use?

- WHEN YOU SELECT THE PREDESIGNED TEMPLATE FILE, APP TAKE ITS COLUMN HEADERS AS REFERENCE AND SEARCH FOR MATCH IN THE EXCEL FILES FOUND IN YOUR SELECTED TARGET FOLDER.
- WHEN A MATCHING COLUMN FOUND, APP THEN COPY THE ENTIRE DATA OF THAT COLUMN TO NEW EXCEL FILE.
- APP THEN CARRY OUT THE PROCESS FOR THE ALL EXCEL FILES PRESENT IN THE TARGET FOLDER.

FIND AND REPLACE TAB

- FIND AND REPLACE TAB USED TO SEARCH FOR SPECIFIC COLUMN HEADERS IN THE EXCEL FILES OF TARGET FOLDER.
- SUPPOSE YOU TARGET FOLDER HAVE EXCEL FILES WITH DIFFERENT VALUE OF BUSINESS NAME. E.G. SOME FILES HAVE BUSINESS NAME, SOME HAVE TITLE OR SOME HAVE ONLY NAME. ALL OF THE COLUMNS HAVE BUSINESS NAME STORED UNDER THE COLUMN HEADER. SO, USING THE COLUMN HEADERS WE CAN SIMPLY REPLACE THEM IN OUR DESIRED FORMAT AND THEN USE THE MERGE FUNCTION TO CREATE THE NEW FILE.

FIND AND REPLACE TAB

Data Merger

Data Copy Find and Replace Support

Select folder containing source files:

Browse

Find text:

Title

Replace with:

Business Name

Start Find and Replace

Select the Folder where your excel files are stored.

Type what text you want find, as an example we want to find column headers with text Title. So, here we type Title

Type what text you want to replace with, as an example we want to replace column headers with text Business Name. So, here we type Business name

Just press the Start, that's all. The app will go through each file in the folder and replace the found text with our desired text. You can use Find & Replace Tab to customize your excel files with Your Template File.

DO I HAVE TO INSTALL ANYTHING TO RUN THIS APP?

No, You dont have to install anything. Just un-zip the file and start using it.

 updated_template.xlsx

This is the final output file after merger/copying. The output path will be displayed in the App console itself.

Data Merger

Merge specific data from different excel files at once.

IS THIS DATA MERGER APP FREE TO USE?

ANS- Yes. No fees attached.

But if the app helped you to solve any of your issue and You want to encourage me for further development, You can make donations towards future developmnet

How can I sent the donation?

ANS- You can send the donation to my PayPal account or even pay via UPI if you want to. Just email at **edataworker@outlook.com** to get the address. PayPal payment link is already given in the App itself.
